SUMMARY

Product Designer and AI Engineer with 4 years of experience building Web and Mobile digital products (SaaS, B2B and B2C). I combine the full Product Design process (discovery, information architecture, prototyping and Design Systems) with AI engineering: I build end-to-end products with AI-assisted development, integrate LLMs into products, design prompts and conversational flows, and optimize conversion through A/B testing and funnel analysis. What ties both sides together is customer obsession: every interface, code or model decision starts with the people who will use it and the impact it has on the business.

SKILLS

AI Engineering	AI-assisted development (Claude Code, Cursor) · Figma AI / Figma Make · MCPs (Figma, database) · LLM API integration · Prompt Engineering · Conversational flow design · User-centered evaluation of AI responses
Product Design	Product Discovery · UX Research · Benchmarking · Information Architecture · User Flows · Wireframes · Prototyping · User Testing · UX/UI · Design Systems · Accessibility · Responsive Design · Handoff
Growth	A/B testing · Conversion funnels · CRO · Landing pages · Google Analytics 4 · Microsoft Clarity · Technical SEO
Development	Next.js · React · TypeScript · Tailwind CSS · Prisma · PostgreSQL · Vercel · Remotion · HTML · CSS
Tools	Figma · FigJam · Framer · Miro · Notion · Trello · Maze · Photoshop · Illustrator

FEATURED PROJECTS

Essencial Perfumaria & Salão — Website + Management System	2026
Full-stack design and AI-assisted development · essencial-perfumaria.vercel.app	
- Designed and built, single-handedly and from design to deployment, the catalog website and management system for a perfume store and beauty salon, using AI-assisted development (Next.js 16, React 19, TypeScript, Prisma, PostgreSQL and Vercel). - Brought the store's entire routine into a single dashboard: point of sale with barcode scanner and split payments, batch stock intake, label printing, customers, salon services and finances. - Designed the catalog around the end customer's journey: filters, search, ordering straight through WhatsApp and an app-like mobile experience that installs on the home screen. - Implemented role-based permissions (owner and staff), argon2id authentication with secure sessions, and image uploads on Vercel Blob. - Built the funnel up to the WhatsApp order with Analytics and Microsoft Clarity and ran A/B tests on the conversion points, each with a written hypothesis and a primary metric defined upfront; per-product technical SEO (sitemap and Open Graph) supports organic acquisition. - Ran live user tests with the owner and staff in the real counter routine and fixed the 3 issues they surfaced: a login that rejected pasted passwords with stray spaces, a search that missed categories, brands and plurals, and a first-access error caused by a race condition. - Produced the product's launch video as programmatic motion design with Remotion and React.	

Full-stack design and AI-assisted development · ateliê-diane-almeida.vercel.app

- Designed and built, from Figma to deployment, the catalog website and management dashboard for a dress atelier (Next.js, React, Prisma and PostgreSQL): a catalog the owner updates herself, fitting appointments, inventory, rentals with security deposits and finances.
- Measured the catalog → WhatsApp/booking funnel (GA4 with Consent Mode v2 and custom metrics in the dashboard) and ran A/B tests on the booking calls to action.
- Ran user tests inside the store with the owner and her team, which led to two features outside the original scope: catalog categories and subcategories, and damage tracking for rented dresses, charged against the security deposit.

EXPERIENCE

UX/UI Lead | Product Designer — RHRecruiter

Jan 2026 – Present

Freelance · Remote

- Lead a team of 3 UX/UI Designers at RHRecruiter Labs, from discovery to the final product interfaces.
- Redesigned the landing page with a conversion focus, driving a significant increase in visits and subscriptions.
- Redesigned the internal platform, which required heavy support for new customers, making it intuitive and reducing the team's time spent explaining the system.

Product Designer — Conecta 360°

Jan 2025 – Jul 2026

Full-time · Remote

- Turned the stakeholder's vision into a product the engineering team could execute, leading discovery, research and benchmarking on Brazil's NR-1 occupational health and safety standard.
- Structured user flows and information architecture and designed the core screens and Figma prototype, aligning business and engineering around a single solution.
- The solution evolved and became part of the Lean Learn platform.

UX/UI Designer — Frontend Fusion Community

Jan 2024 – Jun 2024

Full-time · Remote

- Worked with a PO and Scrum Master on a platform for a nonprofit that prepares people to enter the job market, using Lean Canvas, Opportunity Solution Trees and User Flows during discovery.
- Expanded the scope from a landing page to a complete platform, with an internal area that simplified the administrators' routine.
- Co-created a scalable Design System, now reused across other community projects.

Product Designer — North Studio

Aug 2022 – Dec 2023

Minas Gerais, Brazil · Remote

- Designed Web and Mobile interfaces for clients such as Essencial Perfumaria (inventory system), Recheiaê (food delivery) and a financial planning product.
- Worked side by side with developers, improving handoff, documentation and component organization to deliver solutions that were feasible to build.

EDUCATION

Bachelor's in Product Design — UNIASSELVI · In progress

UX/UI Designer Program — EBAC (British School of Creative Arts and Technology)

COURSES AND WORKSHOPS

Artificial Intelligence (EBAC) · Figma to Framer with AI · Applied Figma (EBAC) · Photoshop from Scratch (EBAC) · Tilda (EBAC) · Career Planning (EBAC) · Building an App from Scratch · DevArt: A New Day
